

1 COMPUTER CODE INTRUSION DETECTION SYSTEM BASED ON ACCEPTABLE
2 RETRIEVALS

3 Abstract of the Disclosure

4 Methods, apparati, and computer-readable media for
5 protecting computer code (1) from malicious retrievers (3). A
6 method embodiment of the present invention comprises the steps of
7 generating (22) retrieval information characteristic of data sent
8 to a retriever (3) by the computer code (1) in response to a
9 retrieval command (5) issued by the retriever (3); accessing at
10 least one rule (6) using at least some of said retrieval
11 information as an input to said at least one rule (6); and, when
12 said at least one rule (6) informs that the retrieval is not
13 acceptable, flagging (28) the retrieval command (5) as
14 suspicious.
